Help Prevent and Manage Pharmacy Scams

Use this checklist to help prevent your pharmacy from becoming the next victim of a pharmacy scam.

Goal	Suggested Approach
Help PREVENT scams	
Adhere to policies and procedures	<input type="checkbox"/> Stay current and follow policies to maintain security (e.g., “safe words,” pin numbers, multifactor authentication). <ul style="list-style-type: none"> ○ It can be tempting to skip steps when things are busy (e.g., increased workload with vaccinations, staffing shortages). Scammers are counting on this as their “way in.”
Watch for the four “Ps”	<input type="checkbox"/> Be aware of the four “Ps” that scammers might do: ² <ul style="list-style-type: none"> ○ PRETEND to be from a legitimate organization. (e.g., pharmacy inspector, wholesaler, distributor). ○ say there is a PROBLEM (e.g., product recall, payment processing issue). ○ try to PRESSURE you to take quick action (e.g., pay a fine to the pharmacy board “immediately,” order a particular product now or it will no longer be available). ○ request PAYMENT in a way that is out of the ordinary (e.g., to a “new” account number, over the phone instead of online).
Be aware of accurate information scammers use	<input type="checkbox"/> Scammers often have lots of real and accurate information. Here are some examples of things scammer may know, have access to, or share. Do NOT rely solely on this information, even though it sounds legitimate. ¹ <ul style="list-style-type: none"> ○ caller ID. Scammers have been known to “spoof” phone numbers making it appear that the call is coming from an actual phone number of the organization they are pretending to represent. ○ address. Scammers often know your pharmacy address and the address of the organization they are pretending to represent. ○ account numbers. Scammers do their homework, from hacking your computer to “dumpster diving,” to find this information before contacting you. ○ pharmacy national provider identification (NPI) numbers or license numbers. These can easily be found online.
Verify identity	<input type="checkbox"/> When things seem off, trust your gut. A legitimate organization will be accommodating to verify any information you need. <input type="checkbox"/> Ask for key information to verify identity, such as: ^{1,2} <ul style="list-style-type: none"> ○ name ○ inspector badge number ○ previous order information (scammers may indicate they can’t recall or that they are new to the job) <input type="checkbox"/> Resist the pressure to act immediately. ² Tell the scammer you need to call them back. When calling back: ² <ul style="list-style-type: none"> ○ use the phone number you typically use for this organization or the phone number listed on the organization’s website. ○ do NOT call the phone number on the caller ID or a different number they tell you to use.

Goal	Suggested Approach
Help PREVENT scams, continued	
Protect information	<ul style="list-style-type: none"> <input type="checkbox"/> Be cautious about what information you give out. Stop and think before you respond:¹ <ul style="list-style-type: none"> <input type="checkbox"/> Is the information the scammer is asking for something that someone from the organization should know? <ul style="list-style-type: none"> <input type="checkbox"/> For example, someone who truly works for your wholesaler should know the product ID. A scammer may not be familiar with the wholesaler’s product ID for a particular drug. The scammer may try to use a national drug code number (NDC) instead (or DIN in Canada).¹ <input type="checkbox"/> Is the scammer asking for something that seems inappropriate? <ul style="list-style-type: none"> <input type="checkbox"/> For example, a scammer may call indicating they are performing maintenance on their system and ask you for your user ID and password “just to make sure everything is still working correctly.” You should NEVER give out your login information.³ <input type="checkbox"/> Avoid clicking on links or opening email attachments from anyone you don’t know. Phishing emails can often look like they are from a company you know and trust.⁴ <ul style="list-style-type: none"> <input type="checkbox"/> Look for clues that the email is a scam (e.g., a generic greeting like “hi dear”, misspellings or poor grammar).⁴ <input type="checkbox"/> Links or attachments may give a scammer access to information on the computer.⁴ <input type="checkbox"/> Use the same philosophy you use to stay compliant with patient privacy (e.g., HIPAA in the US): only give out necessary and appropriate information.
What to do if a scam occurs	
Report the scam	<ul style="list-style-type: none"> <input type="checkbox"/> If you are a technician, notify your pharmacist immediately. <input type="checkbox"/> Help report the scam to the authorities and corporate. Include as many details as you can, such as: <ul style="list-style-type: none"> <input type="checkbox"/> the date and time the scam occurred. <input type="checkbox"/> caller ID information. <input type="checkbox"/> name the scammer used. <input type="checkbox"/> details of your conversation with the scammer. <ul style="list-style-type: none"> <input type="checkbox"/> What information did the scammer share with you? <input type="checkbox"/> What information did the scammer ask you for?
Look for opportunities to reduce future scams	<ul style="list-style-type: none"> <input type="checkbox"/> Review what happened with your colleagues. <input type="checkbox"/> Identify contributing factors. <input type="checkbox"/> Consider if: <ul style="list-style-type: none"> <input type="checkbox"/> there was anything that could have been done differently. <input type="checkbox"/> policies or procedures need to be updated to help prevent something like this from happening in the future.
